

# PUMP THROUGH LUNCH WITH RENROC

## TECHNICAL PRESENTATIONS LUNCH & LEARN SESSIONS

The Renroc Group (Pumps & Engineering) would be pleased to have the opportunity to plan comprehensive technical information sessions with your engineers over lunch (Lunch & Learn).

We have an extensive industrial pump range and we can offer a variety of presentations that will benefit your engineers in the standards of pump construction and the selection of pumps in specialised industries.

We offer comprehensive presentations in:

- API 610: Centrifugal pumps for Petroleum, Petrochemical and Natural Gas Industries (approximately 30-45min)
- API 685: Sealless Centrifugal Pumps for Petroleum, Heavy Duty Chemical, and Gas Industry Services (approximately 45-60min)
- Side Channel Pumps – Low Flow/High Head, self priming gas handling pumps (25-40min)
- Pump Protection (25-40min)

Combinations:

- ASME B73.1 versus API 610 (approximately 15-30min to be delivered in conjunction with API 610)
- Sealless Canned Motor Pumps: Design & Applications (approximately 60-75min)
- Understanding Sealless Magnetic Drive Pumps (approximately 60-75min)
- Mechanical Sealed Pumps versus Sealless Pumps

We have allowed an approximate time for these presentations, which includes time for Q&A.

You will appreciate it is not possible to complete the above in one session and as such, we recommend a series of presentations over a period of time that suits your team. We are happy to organise the order or you can advise us which topics are most important to your engineers.

These sessions will be catered for by Renroc upon confirmation of final numbers.

For further information or to book in a session please contact Andrew Scrimgeour on his details below.
